

Irrigation Pedestals

Built to spec | Easy to install | Vandal resistant

Features & Benefits

- **Built to your specifications.** Each Milbank irrigation pedestal can be custom-built to precisely match the needs of your project. Our engineers can incorporate most types of starters, disconnects, relays, fuses, pushbuttons, receptacles and hour meters to suit all of your power distribution and control needs.
- **Installs in 1–3 hours.** Milbank irrigation pedestals take all of the equipment typically installed separately on a strut-and-backboard structure and put them into one cabinet. And because they are prewired from the factory, installation is as simple as connecting to utility power. And with a pre-poured concrete pad option, setting the pedestal is even easier.
- **Resistant to vandalism.** Copper thieves and vandals can cause some serious headaches—not to mention down-time and expense for repairs. Milbank irrigation pedestals are designed with sealable, lockable compartments that reduce the risk of vandalism. Each pedestal is made in the USA from quality materials that are ready to withstand mischief, the elements, and whatever else the real world throws its way.

Ideal for Nearly Any Irrigation Application
